

## PACE-Monmouth Computer Science

### Objective:

1. Identify all **Inputs** and **Outputs** for the problem presented below
2. Identify any **constants** that might be required
3. Identify any **key formulas** required
4. Identify any "**placeholders**" needed to store temporary computations
5. Write a set of **pseudo-code** statements that will solve the problem

**Problem Statement:** Ask the user to state their height in mixed units (for example, they might be 6 feet, 2 inches). Tell the user how tall he / she is in inches only. (Hint: the user's original height must be entered in two separate steps.)

**Inputs:**

**Outputs:**

**Constants:**

**Key Formulas:**

**Placeholders:**

**Pseudo-Code:**
